Leading Organizations That Manage Smarter with Raritan Products

Raritan®

A brand of Legrand®

We're All About Innovation

Raritan began developing KVM switches for IT professionals to manage servers remotely in 1985. Today, as a brand of Legrand, we are a leading provider of intelligent rack PDUs. Our solutions increase the reliability and intelligence of data centers in 9 of the top 10 Fortune 500 technology companies.

Industry Leading PDU Innovation

Raritan's PX® intelligent rack PDUs offer more than just power distribution. In the next pages you'll learn how Raritan took over twenty-five years of embedded computing expertise and customer insights to reinvent the rack PDU and set the gold standard for data center power chain management.

kWh Metering Accuracy

Measure actual energy usage for accurate customer or department charge-back billing. The data can be used to encourage energy efficient behavior, establish power consumption baselines, and analyze the effect of efficiency initiatives.

Energy-Efficient Latching Relays

Latching bistable relays only require power to switch from one state to another, so PDUs consume 67% less energy[†] and produce less heat. The PDUs can also be configured to return to pre-outage state instantly. Our patent-pending outlet-sequencing technology can be leveraged to minimize inrush current.

† For a 24-outlet switched PDU the energy consumption is 7W with latching relays vs. 21W for non-latching relay models.

Full Color Chassis

PDUs are available in ten colors that help reduce errors, and make it easier to identify power feeds. This speeds troubleshooting, thereby lowering the risk and duration of unplanned downtime.

DCIM Monitoring Software

Power IQ® DCIM Monitoring Software automatically gathers power, energy, and environmental data from your intelligent PDUs and connected devices to help maintain uptime, improve capacity planning, and support energy efficiency initiatives.

Data center health maps, power analytics, cooling charts, and reports alert you to potential trouble and help you to understand real-time power load, trends, and capacity at the data center, room, rack, or customer level.

Powered by

Environment Sensors

Optional plug-and-play sensors for temperature, humidity, airflow, differential air pressure, and leaks connect to a dedicated port, feature field replaceable heads, and alert you to potential threats. Contact closure sensors are also supported for use with third-party sensors, webcams, and door locks.

Confidently raise ambient temperatures and adjust fan speed in CRAHs and CRACs to increase your energy savings and get the most out of your cooling systems.

SecureLock™ Power Cords

IEC outlets often fail to hold plugs securely in place. Raritan's intelligent rack PDUs are equipped with SecureLock outlets that lock when using SecureLock power cords to prevent accidental disconnects.

[Back to Table of Contents](#)

Built for How You Work

Intelligent Replaceable Controller

Flush-mount controller with industrial-grade reliability, configurable firmware, disaster recovery support, and hot-swap capability in the event of a malfunction.

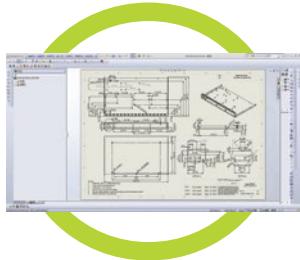

Brilliant Color Display

A built-in accelerometer enables the 220x176 LCD display — the highest resolution in the industry — to change orientation automatically.

UL Listed and Certified

Our PDUs are compliant with the most stringent electrical standards including: FCC Part 15, A; UL Listed and cUL, CE, PSE, SAA, RoHS/WEEE, EAC.

Mechanical Design

We use 3D modeling tools to create the perfect fit for your rack with space-saving Zero U, 1U, 2U, and 3U form factors that provide unobstructed access to your rack for faster service calls or equipment changes.

Remote Power Control

Keep outlets switched off to prevent unauthorized access and avoid tripped circuit breakers. Use remote power controls to reboot hung servers or provision outlets for new devices without ever having to step foot in the facility.

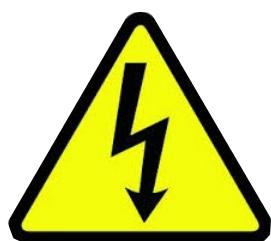

Configurable Power Sequencing

Sophisticated outlet sequencing can power on equipment with single grouped outlets in a set order to minimize circuit breaker trips from inrush currents.

Low-Profile, Flush-Mount Circuit Breakers

Eliminate the need to stock fuses, have licensed electricians change fuses, and the possibility of installing an incorrect fuse; compromising safety and voiding product warranties. Improve rack accessibility by eliminating circuit breaker doghouses.

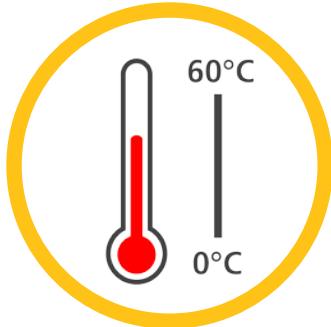

Residual Current Monitoring Option

Reduce the risk of electric shock by measuring current leaking to ground. The residual current circuitry is checked automatically and a system alert is generated to keep technicians safe from harm.

For Dense, High-Power Racks

140°F (60°C) Max Temp

Raritan's intelligent PDUs support a maximum operating temperature of up to 140°F (60°C) for reliable performance in dense high-heat environments so that they continue to operate reliably in the harshest of conditions.

Terminal Block Accessibility Option

Save thousands of dollars by eliminating the need for expensive plugs, connectors, and SOOW cables. Eliminate additional points of failure and unnecessary air obstruction that impedes cooling systems.

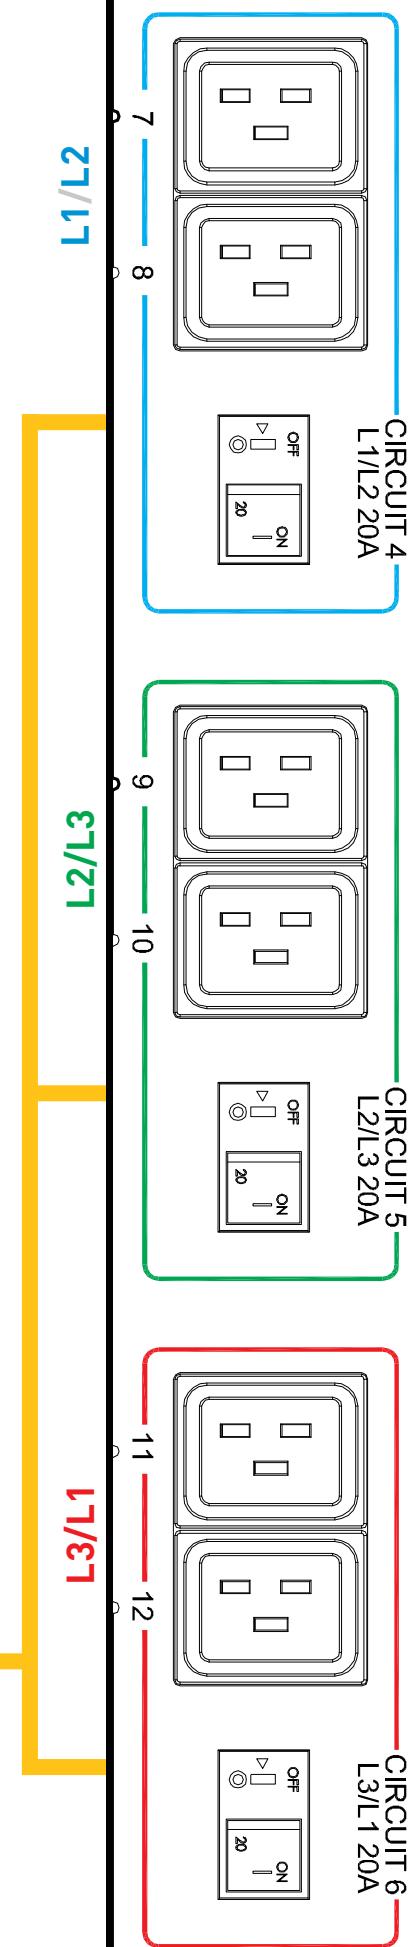

400V Three-Phase Models

We offer a broad range of high-power, 400V three-phase models that support up to 55kW per rack PDU. Running higher voltages at lower currents means smaller and fewer cables, which use less copper, weigh less, occupy less space, and cost less.

Alternate Phase-Sequenced Outlets

Certain three-phase models feature phase-sequenced outlets: a unique wiring scheme that simplifies deployment of IT devices and balances the three lines to get the most power headroom.

The Power of the USB Port

Cascading

Easily cascade (daisy chain) multiple PDUs in a rack to save money on network connections.

Quick Setup

Use ordinary USB sticks to configure hundreds of PDUs in minutes. Save big on deployment time and costs.

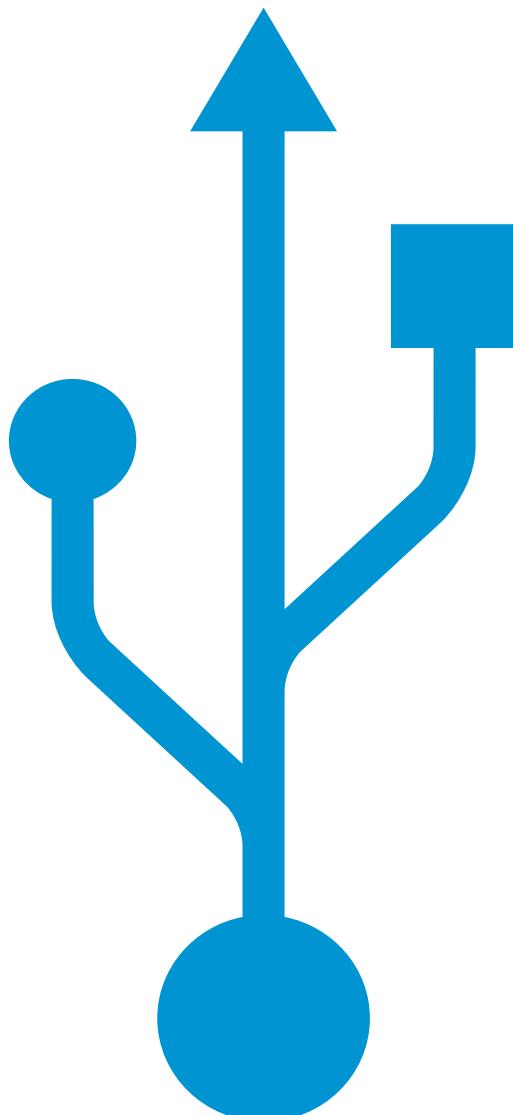

WiFi

Run out of network drops? Raritan iPDU's can be networked over USB Wi-Fi.

PDView App

Raritan's PDView app turns your phone or tablet into an at-the-rack display.

Camera

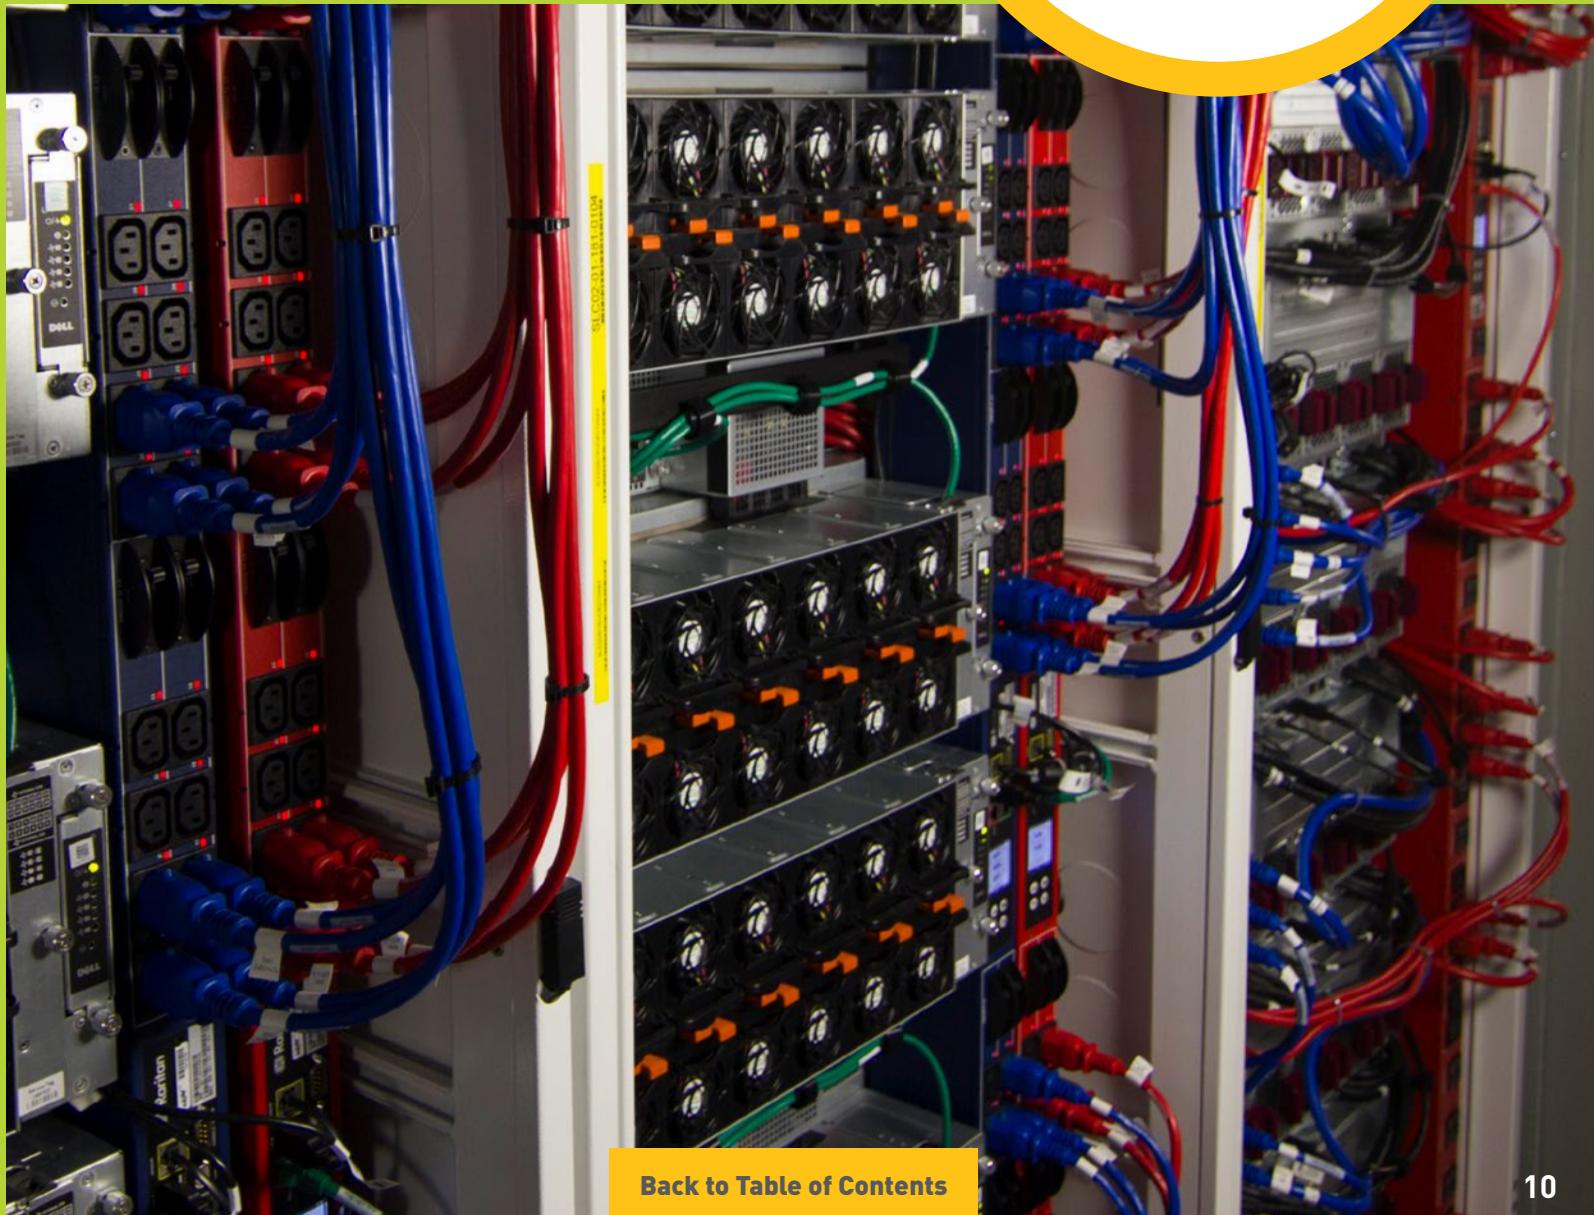

Plug in a camera to monitor your racks or take a snapshot when doors are opened.

Hundreds of PDUs Configured in a Flash

Simply purchase as many USB flash drives as you have PDUs in a row. Copy the desired settings onto your USB flash drives and insert them into every PDU in the row. By the time you return to the first cabinet, it will already be done configuring itself. Now, remove the USB drives and move on to the next row.

This entire process takes place in about 20 seconds. With minimal effort, a single person can configure over 500 power strips in about two hours.

Read more about it at www.raritan.com/usb-upgrade

The Different Types of Rack PDUs

Intelligent PDUs

- **Metered Inlet PDUs** meter power at the PDU inlet-level, and can display the data both locally and over a network.
- **Metered Outlet PDUs** offer the features of metered inlet PDUs, plus metering at the outlet-level, and can display the data both locally and over a network.
- **Switched PDUs** offer the features of metered inlet PDUs and enable authorized users to securely power-cycle outlets remotely in a specific order. Power-sequencing delays minimize inrush currents, prevent unauthorized device provisioning, and can power off devices that are not in use to conserve energy, or reboot devices to quickly restore services.
- **Switched PDUs with Outlet Metering** combine all of the capabilities of switched PDUs with those of outlet metered PDUs.

Non-Intelligent PDUs

- **Basic PDUs** are power strips that are used in environments such as data centers. They distribute voltage and current to power IT equipment in racks.
- **Monitored PDUs** allow a user to view a local display that typically provides information about the electric current. This information cannot be accessed remotely as the units have no network connectivity capabilities.

Intelligent PDUs are the better choice for users who want to reduce costs, increase availability, become energy efficient, and manage existing capacity.

Advantages of Metering at the Inlet, Outlet, and Circuit Breaker

Metering at the Inlet

Metering at the inlet helps users determine power usage and available capacity at the rack which makes it easier to provision equipment. By metering at the inlet-level, users can avoid overloading circuits and more easily calculate efficiency metrics like Power Usage Effectiveness (PUE).

Metering at the Outlet

Like metered inlet PDUs, outlet-metered models help users determine power usage and available capacity at the rack.

More importantly, outlet-level metering allows users to understand power consumption at the device or server-level in order to identify ghost servers, find underutilized servers, and allocate costs to specific business units or customers.

Metering at the Circuit Breaker

Metering at the rack PDU circuit breaker provides early warning if a circuit is becoming heavily loaded and runs the risk of tripping. Typically users receive an alert based on a pre-existing threshold that informs them when power demands need to be reduced.

Branch circuit metering allows users to add new devices to the cabinet or rack without having to worry about tripping the circuit breaker. "Circuit breaker status" notifies users if a circuit breaker has tripped.

Power Cords Stay in, Servers Stay up

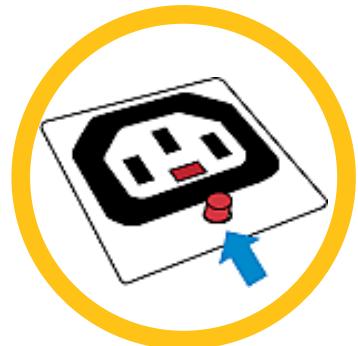

In environments that have high amounts of activity, it is very easy for power cords to become loose and fall out. To prevent that from happening, Raritan provides three options: SecureLock™ power cables mated to Raritan SecureLock™ ready PDUs, push-button locking outlets, and retention clips.

SecureLock

All Raritan PDUs with C13 or C19 outlets have SecureLock™ ready outlets. Inside these outlets are latch slots, which allow the SecureLock™ cables to click and lock into place.

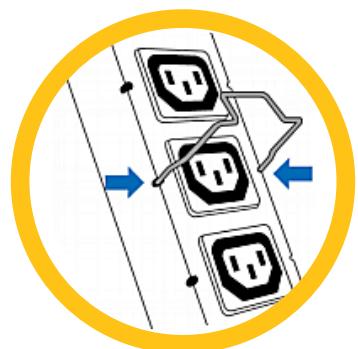

SecureLock power cords are available in a variety of colors, length, and connectors. Note: SecureLock outlets can be used with other cables, but will not lock.

Button Lock

A button-type locking outlet is a security system built into certain PDUs. The C13 and C19 outlets are universal to all C14 and C20 plugs. Once any of these plugs are plugged in, the outlet will automatically lock.

To remove or unlock the cable, you simply hold down the button and the cable will be released.

Retention Clips

All Raritan PDUs are designed to use cable retention clips. Located on each side of every outlet are two small holes where the ends of the retention clip would be positioned. These metal clips ensure a tight and solid fit that guarantee power cables will remain in their outlets.

Raritan will send (upon request and free of charge) a Retention Clip Sample Kit so you can find which clip fits best.

The best option is based on your company's specific needs, but if you prefer color-coded locking power cords, SecureLock is the best option.

Start By Picking the Right PDU for Your Data Center

New data centers and existing data centers where power needs to be deployed to the rack should follow steps 1-7, in order. Existing data centers where power is already deployed to the rack should follow the steps in the following order: 4, 2, 1, 3, 5, 6, 7.

1. Confirm the Infrastructure Voltage

- For North America the input voltage is likely to be 120V single phase, 208V single phase, 208V three phase, or 400V three phase.

2. Establish the Rack Kilowatt Budget

- Estimate the total power (kW, kVA) required.
- Determine the nameplate power rating of each device and calculate a budgeted power requirement, e.g. the sum of the nameplate values x 70%. Nameplate values are conservatively high so these values are typically reduced by some percentage (70% of nameplate is a common rule-of-thumb).
- Determine if additional power headroom should be considered to accommodate future growth or different devices.

3. Determine the Circuits, Phase, and Amperage for the Rack

- Determine the PDU input voltage including the number of phases, type of phases, and the amperage. This will determine the rack PDU plug type.
- Three-phase power may be configured as Delta (three phases + ground) or Wye (three phases + neutral + ground). Note that some data centers are wired for Wye but function as Delta because they don't use the neutral wire. This is acceptable and means that the wiring doesn't need to be changed should the data center decide to switch from Delta to Wye.
- For a data center where the power is already deployed to the rack, one of the best and easiest ways to determine the required PDU input voltage is to know the receptacle into which the PDU will be plugged, e.g. NEMA L6-20R, NEMA L15-20R, NEMA L21-30R, NEMA L22-30R, CS8364C or IEC 60309 60A. Knowing the plug indicates the voltage, phase, phase configuration and amperage, e.g. NEMA L22-30R is 400V, three-phase Wye, 30A.

4. Know What Devices will be in the Rack

- The devices will determine the PDU outlet type(s) and the number of outlets required.
- Determine the types of plugs used on the devices in the rack, e.g. IEC C-14 and C-20 or NEMA 5-20P.

5. Decide if Switching is Desired and What Level of Metering is Required

- Is remote power control required in order to reboot hung servers or keep outlets off to prevent unauthorized access, ensure proper provisioning, and avoid tripped breakers?
- Is PDU inlet-level metering sufficient, or is the additional detail of outlet-level metering desired?

6. Learn the Rack PDU Installation Options

- Determine the form factor that best fits the racks: typical horizontal PDU form factors are 1U (1.75 in., 44 mm) and 2U (3.5 in., 88 mm) high; there are also Zero U vertical PDUs of varying lengths.
- Find the power inlet location, i.e. where the power feed should enter the PDU. If the power is being run through a raised floor, a bottom feed may be most convenient. If the power is being run from an overhead busway, a top feed may be optimal. Consider how the input feed cable routes through the rack and cable bend radius to determine whether feed should enter at the end of the PDU chassis or the front face.
- Decide on the proper length of the PDU input power cord (3m is typically the standard).
- Consider how the device plugs will be prevented from accidental unplugging. There are retention clips, specially designed locking outlets, or special locking power cords, such as Raritan's SecureLock™ cords.

7. Figure Out if Advanced Features are Needed

- Will environmental monitoring such as rack inlet cooling, temperature and humidity, airflow or air pressure be needed?
- Will the PDU be connected to the LAN via hardwire Ethernet connections or Wi-Fi?
- Should other networking options be considered, such as Gigabit Ethernet?
- Do PDUs need to be cascaded/daisy chained together to minimize Ethernet drops?
- Are colors desired to indicate different power feeds, e.g. A and B feeds, or different power chains?

Now that you understand your PDU requirements, use the charts in the next section to pick the PDU needed for your data center.

Ready to Ship Program

Running a little bit late on selecting the Rack PDUs for your new data center?
Raritan stocks select PDU models for fast delivery.

Raritan's Ready to Ship program provides many popular PX intelligent rack PDUs quickly to customers within the United States. RTS 3 allows customers to receive their PDUs within three weeks from when Raritan receives a formal order.

The program offers rack PDUs with and without switching, horizontal and vertical mounting and two different transfer switches.

Look for bolded part numbers in the tables on the following pages to see which models are included in RTS 3.

PX® Intelligent PDU Models

The PX® intelligent rack PDU series offers hundreds of models to power all your data center applications, including models with outlet switching, individual outlet metering, high power for blade servers and high-density applications, and 400V three-phase power distribution.

Need a special PDU for your Data Center?
See page 33 for unique PDU requirements.

Can't Find the PDU You Need for Your Data Center?

Along with the hundreds of off-the-shelf models, our rack PDUs can be engineered to order (ETO) and built to meet your current and future data center power distribution needs. If you can't find what you're looking for among hundreds of PX® models, give us a call. We will work with you to recommend, design, and implement a fully customized solution that will meet your needs.

Customization options include:

- PDU Color
- Length of Line Cord
- Line Cord Entry Location
- Outlets
- Configuration Options
- Plug Options
- Overcurrent Protection
- Line Cord Type
- Control Card
- High KAIC or Fuse Options
- Form Factor & Dimensions

Call us at 800-724-8090 to discuss
your unique requirements.

SecureLock™ Power Cords

Eliminate the risk of power cords vibrating loose or being knocked out by technicians working on racks. Integrated, locking tabs hold the AC power connector to receptacles. SecureLock cables come in three colors – black, red, blue – to make it easier to identify redundant power feeds to IT equipment and make troubleshooting easy.

Raritan vs The Competition

Genuine Securelock

- Ships coiled
- Available in several colors
- Rated to 221°F (105°C)
- Tested, warranted to securely interconnect with Raritan SecureLock-equipped rack iPDUs

Brand X

- Varied temperature ratings, shipment conditions, etc.
- Not tested or warranted to securely interconnect with SecureLock-equipped rack PDUs
- Limited color options

Key Features

- 105°C (221°F) max temp
- IEC C-14 (m) to IEC C-13 (f)
- IEC C-20 (m) to IEC C-19 (f)
- Available in black, red, and blue
- Lengths from 2–15ft [0.6–4.6M]
- Ships coiled, not kinked

Power IQ® DCIM Monitoring

Power IQ® DCIM Monitoring Software automatically gathers power, energy, and environmental data from your intelligent PDUs and connected devices to help maintain uptime, improve capacity planning, and support energy-efficiency initiatives.

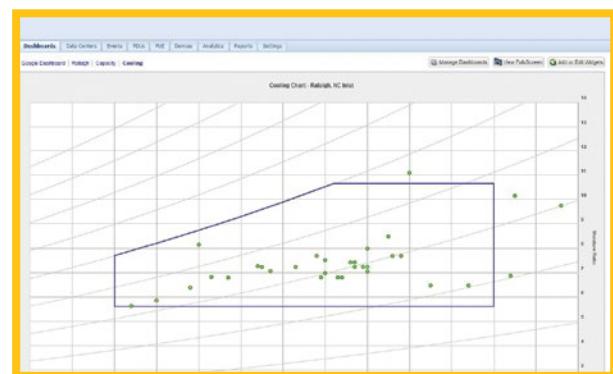

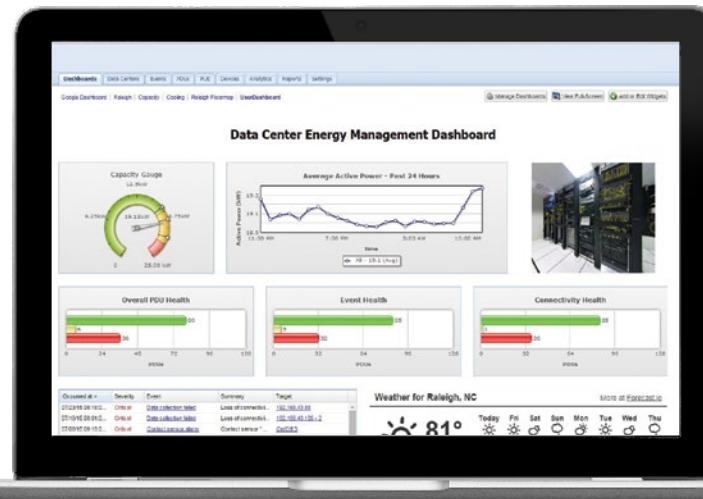

Get one-click access to power, cooling, airflow, events, and more.

See real-time power load, trends, and capacity at the data center, room, rack, or customer level.

Visit www.raritan.com/poweriq

Data center health maps, power analytics, cooling charts, and reports alert you to potential trouble.

Powered by

PX® Inline Meters

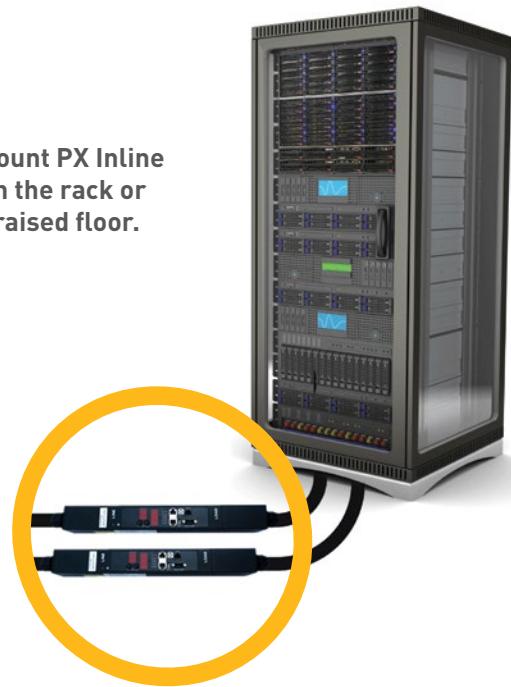

The PX Inline Meter series is a simple way to add power and environmental monitoring to other vendors' basic PDUs. It monitors standalone IT equipment such as a mainframe or storage device. Simply wire the inline meter into existing circuits; there's no need to remove or re-cable IT equipment. Easily mount it in the rack or under a raised floor.

Key Features

- Remotely monitor A, V, kVA, kW, kWh to +/- 1% accuracy.
- Support for Raritan environmental sensors.
- Customizable alerts via SNMP, e-mail and syslog.
- 1U and 0U form factors with AC terminals, IEC C20/C19, Clipsal, and NEMA plugs & receptacles.
- Available in 1, 2, 3, and 4 circuit models, 100V Single to 415V three phase.
- Seamlessly integrates with Power IQ® DCIM Monitoring Software.

Easily mount PX Inline Meters in the rack or under a raised floor.

Branch Circuit Monitors

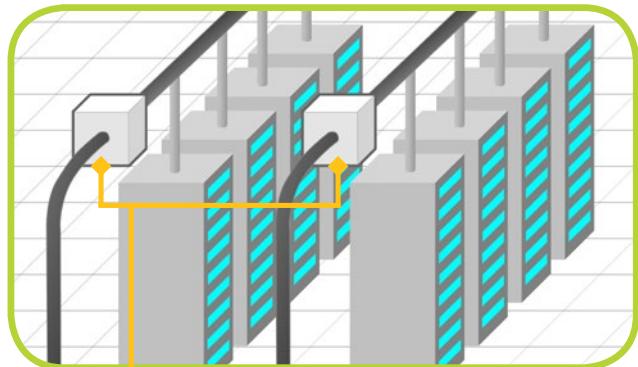

The Branch Circuit Monitor (BCM) system provides real-time views of electrical capacity and power usage on main circuits, branch circuits, remote power panels and panel boards. It can also be used to monitor busways.

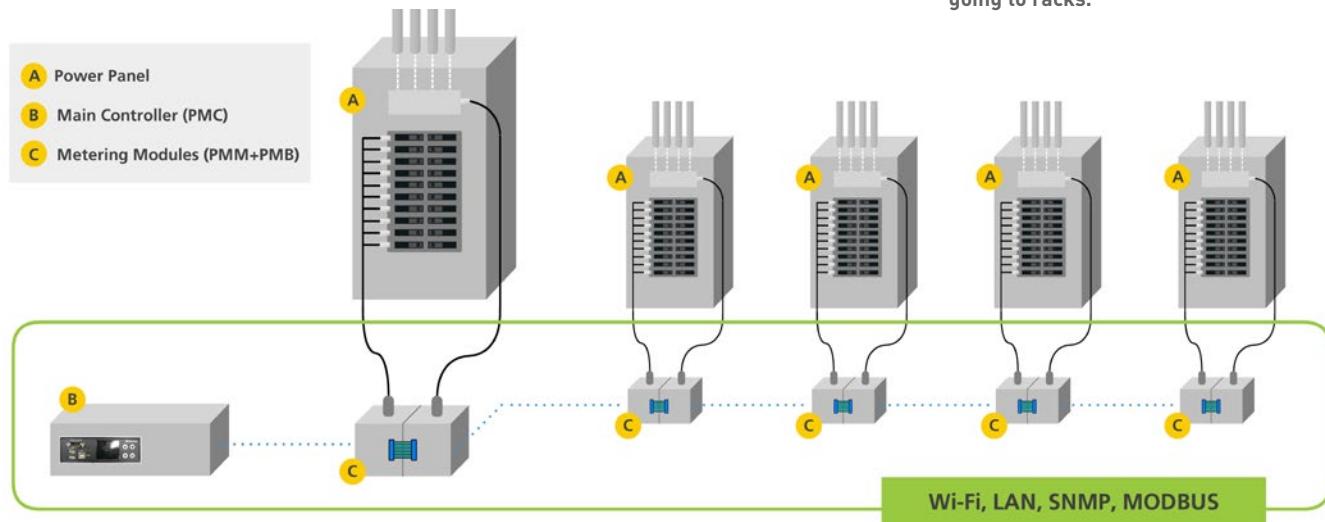

Key Features

- Collects data on: A, V, kW, kVA, power factor, and kWh.
- One Power Meter Controller (PMC) supports up to 70 busway power metering modules (PMM).
- Metering adjusts for current transformer (CT) orientation on wires, CT can connect to live circuits.
- Panel Schedule can be defined in excel, then uploaded to USB stick for fast configuration.
- Seamlessly integrates with Power IQ® DCIM Monitoring Software which offers auto-discovery at the panel.

Monitor Upstream from IT Equipment Racks

Unique Modular Design: Add Metering Only Where Needed

Part Number	Description
BCM2-9610Y	96 Channel Branch Circuit Meter Enclosure - provides power and energy monitoring. Supports up to three-phase 480V. Monitor 3Phase Mains lines, Neutral and Ground and up to 96 branch circuits. Metering accuracy to 0.5%. Includes intelligent Controller for remote access. CE/UL listed.
BCM2-9610Y-GO	96 Channel Branch Circuit Meter Enclosure - provides power and energy monitoring. Supports up to three-phase 480V. Monitor 3Phase Mains lines, Neutral and Ground and up to 96 branch circuits. Metering accuracy to 0.5%. Can be daisy-chained with BCM2-9610Y for remote access. CE/UL listed.
PMC-1001	Rack Mountable intelligent controller for remote access of branch circuit and power metering modules. CE/UL listed.
PMM-1000	Power Meter Mains module. 3 module width DIN Rail module meters 3 phase Mains lines, Neutral and Ground. Remote access requires PMC. CE/UL listed.
PMB-1960	Power Meter Branch module. 3 module width DIN Rail module meters up to 96 branch circuits. Requires PMM module to monitor mains. CE/UL listed.
KIT	See www.raritan.com website for entire list of Kits available including split core CTs, and multi-conductor cables.

Intelligent Rack Transfer Switch

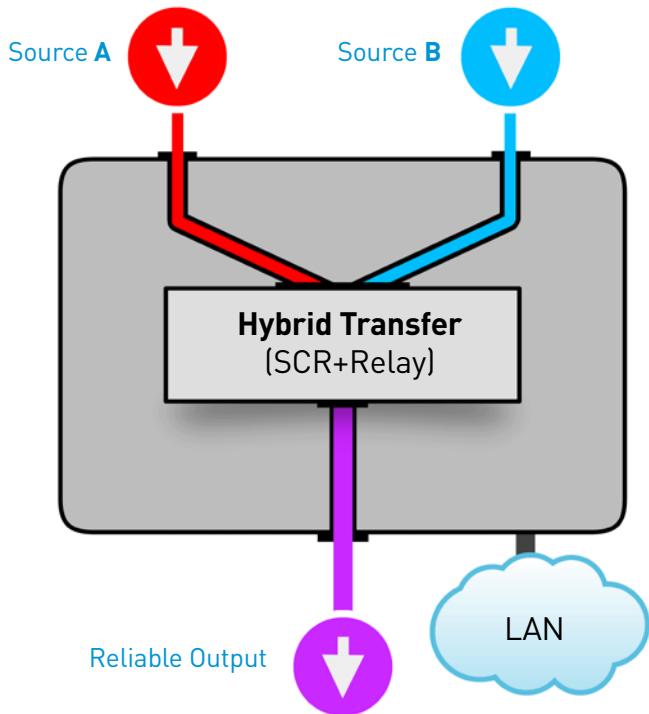

Our hybrid rack transfer switch system provides transfer times within 4 to 8ms, with great energy efficiency, and at a great price. It also offers inlet, outlet, and branch circuit level power metering; and outlet-level switching for better remote power control.

Key Features

- Current sampling at 4,800 times per second for load transfers within 4 to 8ms.
- Oversized relays, rated at 48A, and SCRs, rated at 70A.
- Relay contact air gap of 3.3mm to prevent electric arcing.
- Two single-throw relays instead of one double-throw relay to support reliable out-of-phase transfers.
- Inlet, outlet, and branch circuit level metering; and outlet-level switching.
- Seamlessly integrates with Power IQ[®] DCIM Monitoring Software.
- Uses Raritan's Asset Management Tags (AMT) and Asset Management Sensors (AMS), to provide real-time asset location.

Reliable Load Transfers in 4-8 Milliseconds

EMX - Smart Cabinet Controller

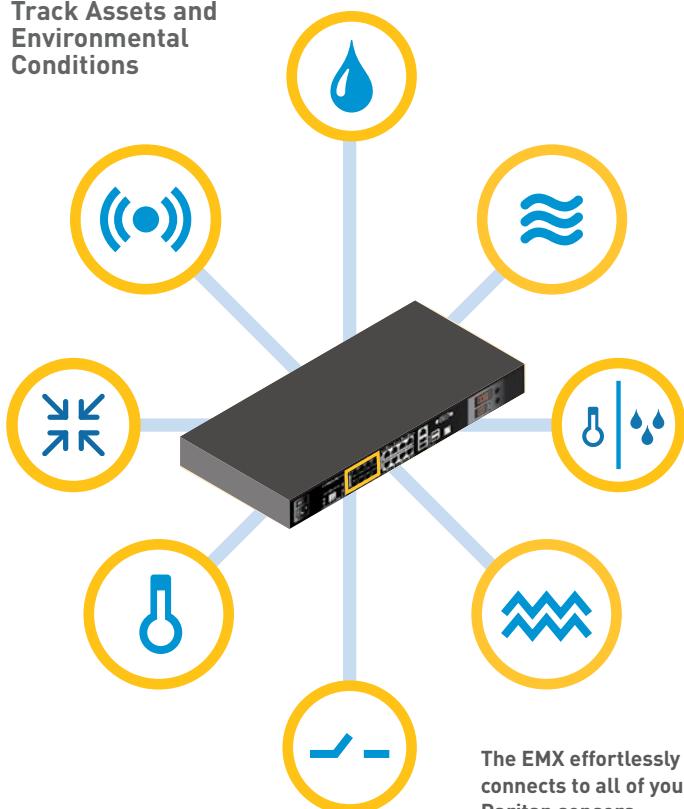

The EMX smart cabinet controller offers up to eight sensor ports, eight feature ports for Raritan's dynamic asset-tracking solution, and eight RS-485 ports, all in a 1U form factor. It is ideal for network closets, labs, and data centers that don't already possess an intelligent PDU.

Key Features

- Support for up to 128 sensors for environment monitoring and management.
- Seamlessly integrates with Power IQ® DCIM Monitoring Software.
- USB webcam and contact closure support help maintain cabinet security.
- Local LCD display with capacitive touch buttons for easy access to data.
- Web-based access to real-time sensor data and status of all devices in the rack.
- Accessible via 10/100 Ethernet or WiFi so you can use existing infrastructure.
- Asset Management Strip Support

Track Assets and Environmental Conditions

The EMX effortlessly connects to all of your Raritan sensors.

Part Number	Description
EMX2-111	Smart rack controller with 1 RJ-12 sensor port, 1 RJ-45 feature port for AMS, 1 RJ-45 RS-485 port, 1 USB-A port, 1 USB-B port, 1 RJ-45 Ethernet port, 1 DB-9M console/modem, LCD display
EMX2-888	Smart rack controller with 8 RJ-12 sensor ports, 8 RJ-45 feature ports for AMS, 8 RJ-45 RS-485 ports, 2 USB-A ports, 1 USB-B port, 1 RJ-45 Ethernet port, 1 DB-9M console/modem, 2 contact closures, LCD display

Environment Sensors

Raritan's environmental sensors are deployed as plug-and-play options for the PX® intelligent rack PDU series, EMX Smart Cabinet Controllers, PX® Inline Meters, Rack Transfer Switches, and Branch

Circuit Monitors. Raritan's environment sensors make it easy to identify hot spots, cool equipment optimally, prevent downtime, and maintain facility security.

Rack Inlet Temperature and Humidity

The DPX2-T3H1 strings together 3 sensor heads, making it easy to mount them at the bottom, middle, and top of the cool air inlet side as per ASHRAE¹ guidelines.

Vibration

The DX-VBR detects vibrations, such as from earthquakes or damaged fans, along three axes (x, y, z).

Proximity

The DX-PIR detects motion around a cabinet.

Differential Air Pressure

The DPX-T1DP1 meters differential air pressure above and below a raised floor, or between hot aisles and cold aisles to prevent thermal leaks.

Water/Leak

The DPX-WSF-KIT, DPX-WSC-35-KIT, and DPX-WSC-70-KIT sensors monitor leaks on the floor, around an area, on liquid cooled racks, and can detect condensation.

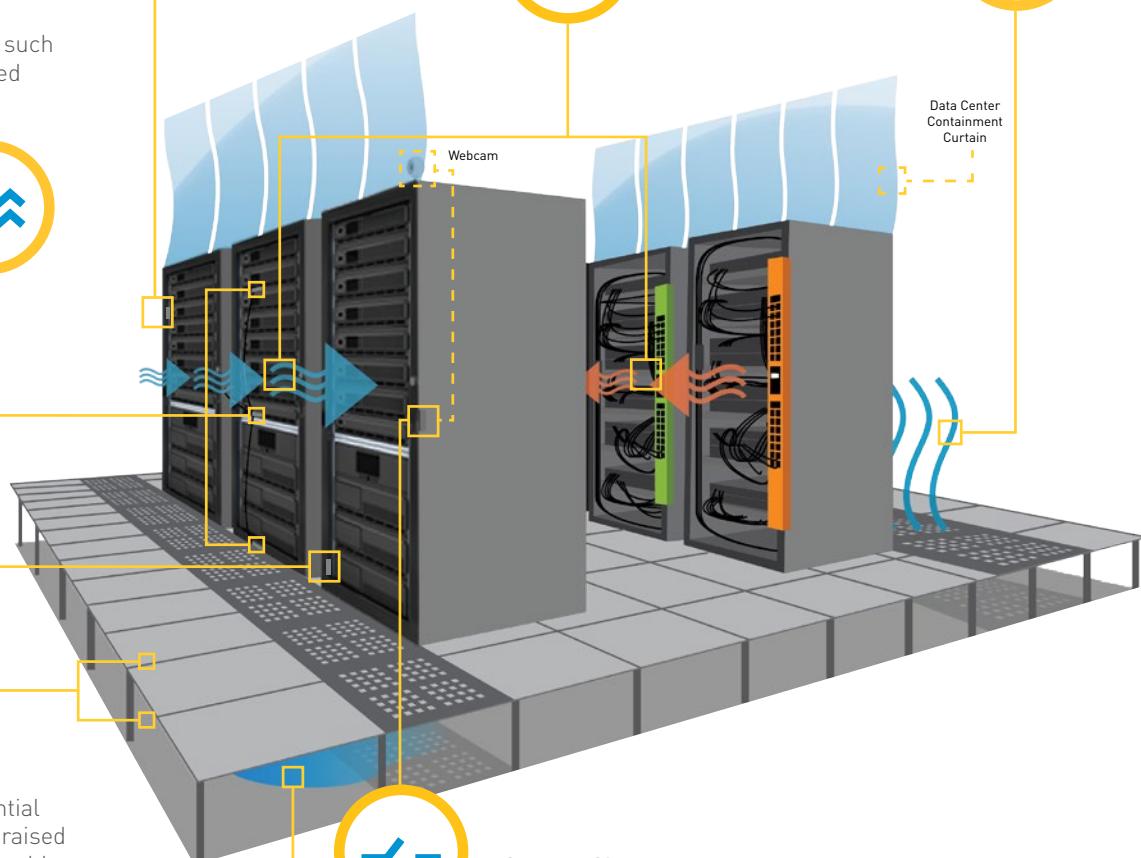

Temperature

The DPX2-T1 can be placed at the front or rear of the rack to monitor cool air entering and/or hot air being expelled, and ensure proper containment.²

Airflow

The DPX-AF1 can meter airflow in plenum space, such as under a raised floor or just above the perforated tiles.

Contact Closure

The DPX-CC2-TR dual contact closure is used with third-party sensors, such as smoke detectors, magnetic door locks, or to trigger webcams whenever a cabinet door is opened. DX-PD2C5 has active dry contacts with 12V power to support door locks and contact closures for third-party sensors.

¹ The American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) recommends measuring the cool air entering IT equipment near the bottom, in the middle, and near the top of each IT rack.

² Additional temperature and humidity sensor options are available.

Environment Sensors

Sensor and Description	Range	Accuracy
DPX-T1 TEMPERATURE SENSOR Single temperature sensor, 10 ft. (3m) cable length, RJ-12 connector.	-40C to +85C	+/- 2C
DPX2-T1 TEMPERATURE SENSOR Single temperature sensor, field replaceable sensor module, 13ft (4m) cable, RJ-12 connector (Not supported by DPX and PX models).	-25C to +75C	+/- 0.3C
DPX-T1H1 TEMPERATURE AND HUMIDITY SENSORS Single combo temperature and humidity sensor, 10ft (3m) cable, RJ-12 connector.	-40C to +85C, 0% RH to 100% RH	+/- 2C, +/- 3.5% RH @ 25C
DPX2-T1H1 TEMPERATURE AND HUMIDITY SENSORS Single combo temperature and humidity sensor, field replaceable sensor modules, 13ft (4m) cable, RJ-12 connector. (Not supported by DPX and PX models)	-25C to +75C, 0% RH to 100% RH	+/- 0.3C / RH +/- 2.5%
DPX-T2H2 TEMPERATURE AND HUMIDITY SENSORS Dual combo temperature and humidity sensors, 10ft (3m) cable from RJ-12 connector to combined temperature/humidity sensor, additional 10ft (3m) cable to second combined temperature/humidity sensor (total length 20ft/6m).	-40C to +85C, 0% RH to 100% RH	+/- 2C, +/- 3.5% RH @ 25C
DPX-T3H1 TEMPERATURE AND HUMIDITY SENSORS Three temperature sensors, middle sensor supporting humidity (four sensors total in three housings), 13ft (3m) cable from RJ-12 connector to first sensor, 3ft (1m) between first and second and second and third sensor housings (PX and PX2 models require firmware PX1.4.1 / PX2.1.5 or higher).	-40C to +85C, 0% RH - 100% RH	+/- 2C, +/- 3.5% RH @ 25C
DPX2-T3H1 TEMPERATURE AND HUMIDITY SENSORS Three temperature sensors, middle sensor supporting humidity (four sensors total in three housings), field replaceable sensor modules, 13ft (4m) cable from RJ-12 connector to first sensor, 3ft (1m) between first and second and second and third sensor housings. (Not supported by DPX and PX models)	-25C to +75C, 0% RH to 100% RH	+/- 0.3C / RH +/- 2.5%
DPX-AF1 AIRFLOW SENSOR Single airflow sensor, 10ft (3m) cable, RJ-12 connector.	0 to 4m/s (787 LFM)	+/- 10%
DPX-T1DP1 DIFFERENTIAL AIR PRESSURE AND TEMPERATURE SENSOR Single combo differential air pressure and temperature sensor, 10ft (3m) cable, RJ-12 connector.	0 to 125 Pa, -25C to +125C with 0.03C resolution	+/- 1.5%
DPX-CC2-TR CONTACT CLOSURE Dual contact closure, requires customer-provided Normally Closed (NC) or Normally Open (NO) switch, e.g. door open/closed, door locked/unlocked, smoke present/absent, etc. Each of the two ports (channels) can be independently set to NC or NO, factory default is NC, RJ-12 connector (PX and PX2 models require firmware PX1.4.1 / PX2.1.5 or higher).	N/R	N/R
DX-PD2C5 CONTACT CLOSURE WITH 12V POWER Two active dry contacts powered by 12V to support door locks. Five digital Normally Closed (NC) or Normally Open (NO) contact closures that require customer-provided NC or NO switches, e.g. door open/closed, smoke present/absent, etc. Each of the five ports (channels) can be independently set to NC or NO, factory default is NC. RJ-45 connector (not supported by DPX, PX or PX2 models).	N/R	N/R
DX-D2C6 SENSOR Two digital dry contacts requiring external 12V power supply to power door locks. Five digital Normally Closed (NC) or Normally Open (NO) contact closures that require customer-provided NC or NO switches, e.g. door open/close, smoke present/absent, etc. Each of the five ports (channels) can be independently set to NC or NO, factory default is NC, RJ-45 connector to connect to PX3, supplied with 6.5ft (2m) RJ-12 to RJ-45 cable to connect to PX2 (not supported by DPX or PX models).		
DPX-WF5-KIT WATER/LEAK SENSOR Floor water/leak sensor plus contact closure sensor, RJ-12 connector.	N/R	N/R
DPX-WSC-35-KIT WATER/LEAK SENSOR 11.5ft (3.5m) rope water/leak sensor plus contact closure sensor, RJ-12 connector.	N/R	N/R
DPX-WSC-70-KIT WATER/LEAK SENSOR 23ft (7.0m) rope water/leak sensor plus contact closure sensor, RJ-12 connector.	N/R	N/R
DX-VBR VIBRATION SENSOR Vibration sensor that detects acceleration along three axes (x, y, z). RJ-45 connector.	0 to 3.64g	0.01g
DX-PIR DIGITAL PROXIMITY SENSOR Digital proximity sensor that detects motion around a cabinet, RJ-45 connector (Not supported by DPX, PX or PX2 models).	16ft (5m), +/- 47 degrees horizontal, +/- 41 degrees vertical	N/R
DPX-ENVHUB2 SENSOR HUB Two-port (1x2) hub to expand RJ-12 sensor ports, comes with mounting bracket and RJ-12-to-RJ-12 cable to connect to, and receive power from, PX and EMX products (Does not support DPX2 sensors).	N/R	N/R

Intelligent Asset Tags and Sensors

Raritan's Intelligent Asset Tag and Sensor system automates IT asset tracking. There is no cumbersome and error-prone manual tracking. Instead, you'll know exactly when and where a device is moved, added, or changed.

Key Features

- Easily attaches to IT devices, allowing you to track them as they are moved.
- Each tag has a unique ID chip and barcode that stores asset information.
- Asset management strip attaches to existing racks magnetically.
- Multicolored LEDs indicate current state such as a maintenance request.
- Options for different height racks with models for 42U, 45U, 48U and 54U racks.
- Seamlessly integrates with third-party DCIM Operations Software.

Asset Management Tag (AMT)

Asset tag with unique ID chip and bar code with adhesive patch to connect to IT devices.

Asset Management Sensors (AMS)

Customizable RGB color LED for each 1U space.

Part Number	Description
AMS-42	Asset Management Sensor kit for 42U height rack. 1 connector and 1 RGB LED per U space.
AMS-45	Asset Management Sensor kit for 45U height rack. 1 connector and 1 RGB LED per U space.
AMS-48	Asset Management Sensor kit for 48U height rack. 1 connector and 1 RGB LED per U space.
AMS-54	Asset Management Sensor kit for 54U height rack. 1 connector and 1 RGB LED per U space.
AMT-100	100-pack of intelligent Asset Management Tags for AMS-nn with electronic ID and bar code.

Intelligent Door Lock

Raritan's Intelligent Door Lock leverages the same network as your existing Raritan devices to create a centralized solution for securing individual cabinets, groups of cabinets, and entire aisles. All activity is logged, making it easier to audit access history and meet regulatory frameworks.

Key Features

- Collective access control for containment and cabinet doors (front and back).
- Centrally manage operation, administration, and setup.
- Uses existing Raritan infrastructure without any need for additional cabling.
- Access can be granted to a technician remotely, saving security personnel time.
- Cabinet access is provided only as needed, preventing errors.
- Event log of: cards, users, lock/unlock history, open/closed doors, alarms.

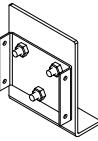

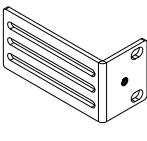

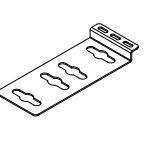

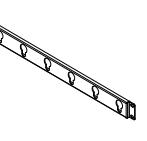

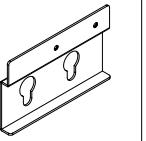

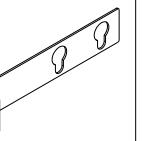

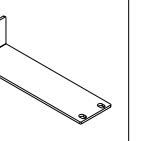

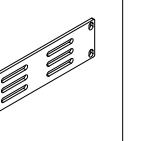

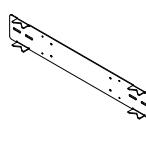

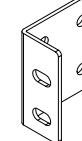

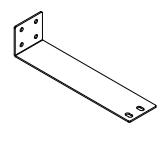

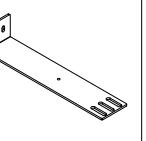

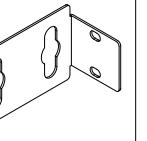

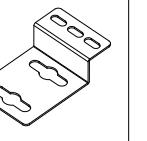

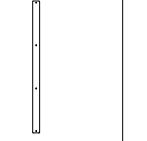

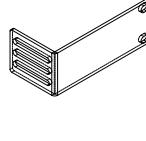

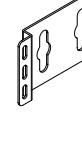

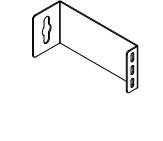

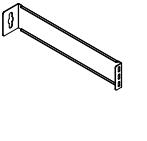

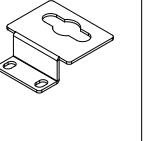

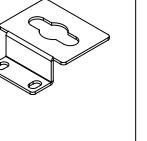

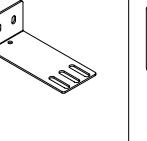

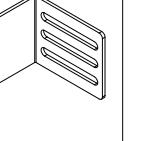

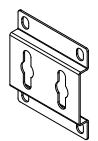

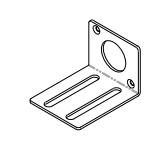

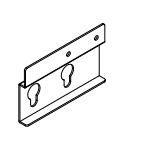

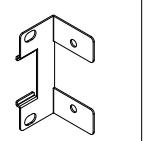

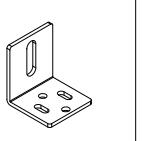

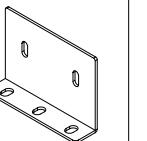

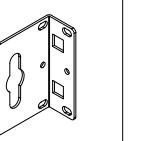

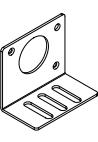

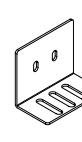

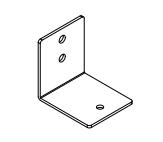

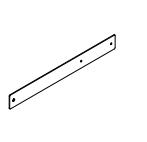

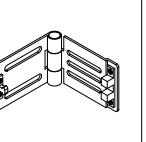

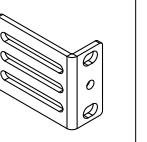

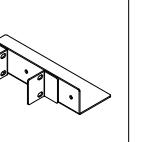

The Intelligent Door Lock Solution integrates with Raritan iPDU's so you can utilize existing infrastructure.

Rackmount Brackets

Our full line of high-quality rackmount brackets are designed to fit 19" racks, and ensure that your equipment and cables are properly mounted, organized, and easy to manage.

Quick Start and Configuration Services

Need configuring and support for your new Raritan PX® Intelligent PDUs and Power IQ® DCIM Monitoring? Let our professional services team do all the heavy lifting for you. Our expert team can help to ensure that you set off on the right foot and know how to manage your Raritan solutions from day one!

Part Number	Description
SVC-PWIQ-QS	One Day PX® Intelligent PDU and Power IQ® DCIM Monitoring Quick Start Service This Statement of Work (SOW) that defines the scope of work and services being contracted from Raritan to assist Client with the implementation of Power IQ® and PX® iPDU including software installation, setup and configuration, and training.
SVC-iPDU-CONFIG	Raritan PX® Intelligent PDU Configuration Service Raritan-built USB sticks based on client provided data center environment information. Kit includes 5 USB sticks and instructions on using USB sticks for Raritan PX iPDU configuration. Note: This service only applies to PX2 and later models that have USB ports.
